OUR HISTORY

1888

REZNOR®

Reznor was founded in Mercer, Pennsylvania by George Reznor

1935

Reznor developed the first gas unit heater for industrial applications

1979

AMBIRAD

AmbiRad was founded, supplying gas fired radiant products

1993

Launch of the Nor-Ray-Vac (NRV) system

2006

NORDAIRNICHE

Acquisition of Sonning Heating systems and merger of Nordair/Niche

2009

BENSON

Acquisition of Benson Heating Ltd

2012

Thomas & Betts acquired by ABB Group

2014

REZNOR®
AMBIRAD
BENSON
AIRBLOC
NORDAIRNICHE
MOLIMEX-THERM

Nortek acquires Thomas & Betts' HVAC business including Reznor, AmbiRad, Gaz Industries & Molimex Therm

2018

Product brands AmbiRad, Benson & Airbloc merged into Reznor

Future

The future is this way...

RADIANT TUBE HEATERS

RADIANT TUBE HEATER

VSUTE

VS models are supplied complete with turbulators, aluminised steel reflector and endcaps.

33-51-222	Rubberised roof plate with fixing kit
7162-FLUE34	Gas vent Terminal/cowl
7166-FLUE30	Adjustable elbow 0 to 90°

RADIANT TUBE HEATER ACCESSORIES

TWIN WALL FLUE KITS

PART NUMBER	DESCRIPTION
TWFK-5A-1	Kit 'A' 1 x 1524mm length tube (7157-FLUE32), 1 x 914mm length tube (7156-FLUE33), 1 x 450mm adjustable length flue (7158-FLUE31), rubberised roof plate and fixing kit (33-51-222) and terminal (7162-FLUE34)
TWFK-5B-1	Kit 'B' as Kit 'A' plus 2 adjustable elbows (7166-FLUE30)

RADIANT TUBE HEATER ACCESSORIES

SMARTCOM CONTROLS

PART NUMBER	MODEL
B-SC3ML-SZR	SmartCom single zone controller Std functions include (but not limited to):- single stage heating, self-adapting optimised start, volt free BMS over-ride, timeclock with overtime facility, fan only operation, frost protection, night set- back, burner lockout indication with reset, internal thermostat
B-SC3ML-MZR	SmartCom multi zone controller As single zone model, but with the following additional functions: two stage heating & cooling, modulating burner control, networking function
29-01-222	SmartCom black bulb sensor

RADIANT PLAQUE HEATER

RADIANT PLAQUE HEATER

SCR-ECO

SCR-ECO units are for use with natural gas as standard and are fitted with a fully automatic burner ignition system requiring a 240v single phase electrical supply. Each unit is supplied with wall mounting brackets and a loose LPG jet.

MODEL	DESCRIPTION	HEAT INPUT KW
SCR-ECO-7/4	7.5kW gas fired plaque heater	7.5
SCR-ECO-18/10	17.5kW gas fired plaque heater	17.5
SCR-ECO-29/16	27.0kW gas fired plaque heater	27.0
SCR-ECO-44/12+12	41.8kW gas fired plaque heater	41.0

RADIANT PLAQUE HEATER

SUNDRIES

PART NUMBER	DESCRIPTION
6506	1/2" BSP Gas tap
6500	1/2" BSP Flexible connector 600mm long

RADIANT PLAQUE HEATER
SORRENTO

The Sorrento range is a robust weatherproof heater available in three configurations.

All models are supplied with a wall mounting bracket & for use with single phase electrical supply.

Sorrento Electric Heater | BRACKETS INCLUDED
 STOCKED IN BLACK, SILVER & WHITE.
 Subject to availability

MODEL	DESCRIPTION	HEAT INPUT KW	DIMENSIONS (mm)	MOUNTING HEIGHT (mm)
SOR15-BLACK	Single linear tube	1.5	402 x 227 x 112	2
SOR15-SILVER	Single linear tube	1.5	402 x 227 x 112	2
SORDL30-BLACK	Double linear tube	3	790 x 227 x 112	2.5 to 4.0
SORDL30-WHITE	Double linear tube	3	790 x 227 x 112	2.5 to 4.0
SORDL30-SILVER	Double linear tube	3	790 x 227 x 112	2.5 to 4.0
SORTL45-BLACK	Double linear tube	4.5	1178 x 227 x 112	2.5 to 4.0
SORTL45-WHITE	Double linear tube	4.5	1178 x 227 x 112	2.5 to 4.0

ELECTRIC RADIANT HEATER

QUARTZ GLOW

The Apollo range of indoor heaters, manufactured from extruded aluminium, offers a choice of power options 1.5kW - 9kW to suit all situations and requirements. They are adjustable both vertically and horizontally for accurate heat placement. Safety guards are available where required.

APOLLO Electric Heater | BRACKETS INCLUDED
AVAILABLE IN BLACK, SILVER & WHITE. Subject to availability

MODEL	DESCRIPTION	HEAT INPUT KW	DIMENSIONS (mm)	MOUNTING HEIGHT (mm)
QH15-1	Single tube	1.5	422 x 255 x 110	2.0 to 4.0
QH 30-1	Double tube	3.0	422 x 390 x 110	3.0 to 4.5
QH 45-1	Triple tube	4.5	422 x 525 x 110	3.5 to 5.5
QHL 30-1	Double linear tube	3.0	857 x 255 x 110	3.0 to 4.5
QHL 45-1	Triple linear tube	4.5	1282 x 255 x 110	3.5 to 5.5
QHL 45-3	Triple linear tube - 3ph	4.5	1282 x 255 x 110	3.5 to 5.5
QHL 90-3	Triple double linear tube - 3ph	9.0	857 x 630 x 110	5.0 to 7.0

CONTINUOUS RADIANT TUBE HEATER SONNING² OHA

Sonning2 OHA is a continuous gas fired radiant tube heating system fitted with either a single internal or external burner, which employs 80% flue gas re-circulation and is designed specially for the building it is required to heat.

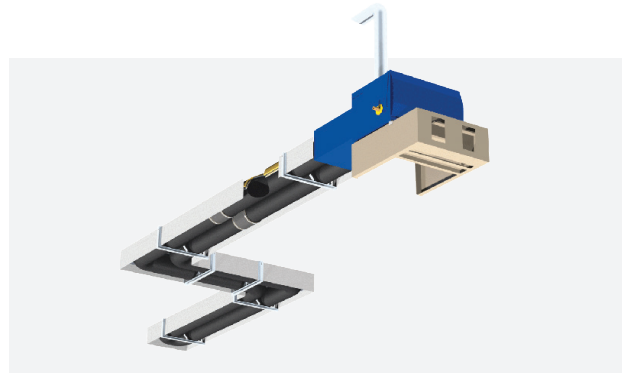

The inclusion of modulating burner on the OHA RHE ranges enables thermal efficiencies of up to 96% to be achieved.

The OHA system is designed to provide uniform heat coverage over the entire floor area. The system can also cater for distinct zones providing a varied degree of comfort level within the overall layout of the building.

Nortek strives to become part of the 'design team', working closely with engineers or end users to determine the specific design parameters for the OHA scheme layout. This contact between the company's engineers and the system designer or client will give the most effective OHA system.

MODEL RANGE

The OHA Series radiant tube heating system includes nine natural gas or propane burner models from 50 to 400kW, radiant tube lengths from 25 to 400 metres. Maximum tube temperatures range from 200°C to 350°C.

The OHA RHE Modulating Series radiant tube heating system includes 6 natural gas or propane burner models from 100 to 370kW, radiant tube lengths from 35 to 250 metres. Maximum tube temperatures range from 120°C to 290°C.

The heaters will operate equally as effective on a wide variety of fuels; natural gas, LPG and oil (OHA only).

Please contact sales on 01384 489700 for more information on Sonning2 continuous radiant tube system.

CONTINUOUS RADIANT TUBE HEATER NOR-RAY-VAC

Introducing the revitalized Nor-Ray-Vac, your trusted radiant system, back by popular demand with cutting edge technology and market leading excellence poised to meet the evolving needs of our customers.

The Nor-Ray-Vac is a gas fired continuous radiant tube heating system, uniquely designed and specified for the building it is required to heat.

The following criteria form the basis of each particular system design:

- Heat loss of the building for the required thermal environment
- Local climate conditions
- Type of activity in the building
- Specific architectural features relating to the structure

The Nor-Ray-Vac is a conventional radiant heating system, that operates with on/off control and continuous modulation. This is achieved by adjusting the vacuum as the building temperature varies. The optimum air/ gas ratio is maintained giving maximum comfort & efficiency whilst minimising fuel consumption.

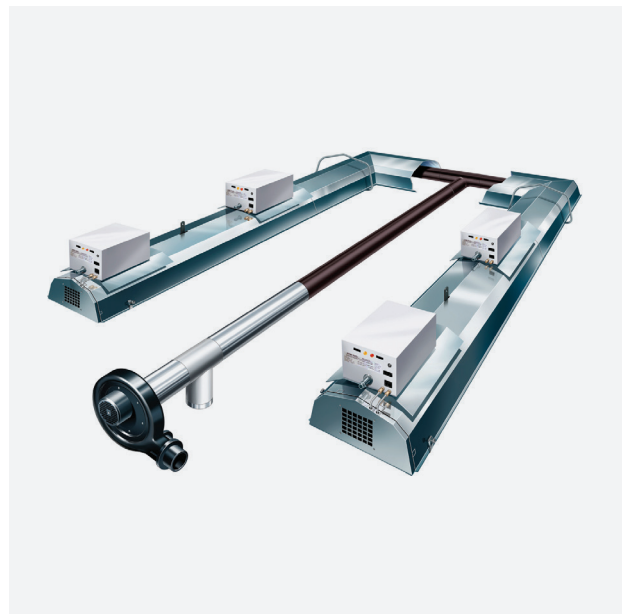

FEATURES INCLUDE:

- Reduces overall costs, with savings of up to 60% being achieved over conventional heating systems
- Stoichiometric or 'perfect' combustion
- Can be designed to a 92% combustion efficiency & >92% thermal efficiency
- Good aesthetic integration with building

MODEL RANGE

The Nor-Ray-Vac Series continuous radiant tube heating system is available in natural gas or propane versions. There are four models in the range - 24kW, 32kW, 38kW and 46kW output - with maximum radiant tube lengths from 9.4 to 27 meters.

Modulating burners are provided on all models allowing them to modulate from 50% to 100% duty [24/12kW, 32/16kW, 38/19kW and 46/23kW]. Maximum tube temperatures range from 450°C to 480°C.

Please contact sales on 01384 489700 for more information on Nor-Ray-Vac continuous radiant tube system

DESTRATIFICATION FANS

DS DESTRATIFICATION FANS

Destratification fans work by recirculating rising warm air back down to where it is needed.

Reznor fans create a strong downdraft to force trapped ceiling heat back to the floor, providing uniform heating and reducing roof temperature.

These fans effectively combat thermal stratification by ensuring heat is evenly distributed throughout the space.

COMET+ CABINET HEATERS

COMET+

The COMET+ range of cabinet heaters combines innovative design with proven heat exchanger technology to provide a efficient cost effective durable range. Standard efficiency models available with modulating burner with a 2:1 turn down with use with Natural Gas (G20) and Propane (G31).

These models are also available with the use of both 35 sec and Kerosine oil. High efficiency (condensing) models are only available in Natural Gas (G20), with modulating burner with 4:1 turn down. All models have EC plug fans as standard.

All models are available in Natural Gas fired, Propane fired or Oil fired versions. Oil fired models are supplied with a fire valve and an oil filter as loose components

NOVAEMS

In addition to controlling, managing and monitoring heating, the innovative system contains a user-friendly panel with the added benefit of remote access.

KEY FEATURES:

HEATING CONTROL

Control and schedule heating with a selflearning system that averages a 43% reduction in energy consumption through greater efficiency.

MULTI-SITE CONTROLS

Schedule the on/off operation to reduce the maintenance and save energy.

REMOTE ACCESS & REPORTING

With a single point of control, view consumption, schedules and more from anywhere with internet access.

NOVA EMS SYSTEM FEATURES	
HEATING CONTROL	REAL TIME MANAGEMENT CONTROL
Scheduling operation of heaters	Easy to navigate user interface
Residual heat utilisation	Cloud based, enabling remote access
Pre-heat optimisation utilising our self learning algorithm	Pre-heat and end time optimisation
Weather compensation	Live data graphs
Accurate temperature control	Password protected access
Process control monitoring to maximise efficiency and safety	Data export
Door switch and failsafe strategy	Site map

SONNIGER LTHW HEATERS

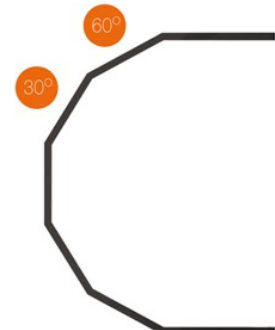

HEATER CONDENS heating and ventilation devices are designed to be applied in buildings of small and medium capacity, especially as production and warehouse halls, car showrooms and service stations, sports halls and stadiums, sacral buildings and churches, retail stores and wholesale outlets, agricultural facilities, exhibition surfaces. HEATER CONDENS is a special, dedicated solution to be connected to low water temperature sources (for condensing boilers, industrial heat pumps).

The main advantages of HEATER CONDENS are the high temperature of exhaust air generated by the low temperature of water supplied to a unit, maximum use of water coil surface – new geometry of coil construction (enhanced fins size, lower space between fins), optimised airflow exhaust – in effect high air exhaust temperature generated on each speed of the fan.

LIRA

AIR TO AIR HEAT PUMP

In an era of climate transition, Reznor continues to innovate. The new LIRA range delivers powerful and sustainable air-to-air heat pumps, providing gas-free heating and cooling for warehouses and industrial buildings – whisper-quiet and highly efficient, even at temperatures as low as -20°C.

The LIRA range of air-to-air heat pumps is the ideal choice to transition your industrial building to a gas-free heating and cooling solution. Be it a warehouse, a manufacturing facility, or a showroom, LIRA provides year-round comfort focused on sustainability and efficiency.

MODEL RANGE:

- Outdoors: Lira Air, Air Cold & Air Plus
- Indoor: Free Blowing Axial Fan
- Indoor: Ductable Plug Fan.

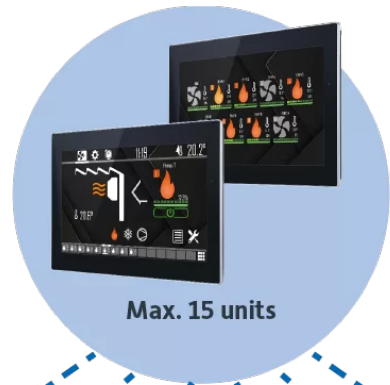

Furthermore, the LIRA is ready for integration with smart grids and solar energy, allowing you to optimise energy use and reduce dependence on the electricity grid.

LIRA delivers a powerful gas-free solution for heating and cooling in industrial buildings - sustainable, efficient, and ready tomorrow.

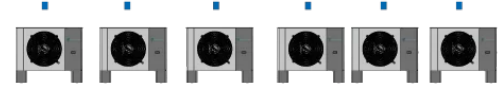

FLEXIBLE INSTALLATION & SMART CONTROL

Whether you choose a free-blowing indoor unit with an axial fan or a ducted module with a plug fan, both options are EC-controlled and designed for low noise emission. The outdoor and indoor units can be positioned up to 30 metres apart, and with a single touchscreen panel, you can control up to 15 units. This ensures maximum flexibility and effortless installation.

LIRA KEY FEATURES

- Heating mode with a maximum output of 50 kW and a COP of 4.38
- Cooling mode with a maximum output of 42 kW and an EER of 4.00
- Quiet operation: 38 dB(A) @ 5m Outdoor and 30 dB(A) @ 3m Indoor for free blowing units
- R32 refrigerant
- Smart Grid ready – photovoltaic integration
- Simple and quick installation
- Touch control panels

Please contact technical design on 01384 489700 for more information on Air to Air Heat Pumps

DF/IDF GAS FIRED HEATER

The Nordair Niche is back! Powered by Reznor for your heating & ventilation needs. Engineered for high-output performance, this unit delivers exceptional heating while improving air quality and reducing energy costs.

Ideal for large commercial spaces and environments requiring precise humidity control, such as pool facilities, the Nordair Niche offers a robust solution with up to 30% greater efficiency. Direct fired models achieve 100% thermal efficiency, ensuring maximum energy utilization.

With straightforward installation options, including direct refurbishments and like-for-like replacements, the Nordair Niche is a smart upgrade for any HVAC system.

The Nordair Niche delivers efficient, direct gas-fired heating for make-up air applications, maintaining slight positive pressure to control airflow throughout the building. Its fully modulating control

system ensures precise heat delivery with minimal energy use.

Ideal for demanding environments, including swimming pool halls and process ventilation systems, the unit supports optional heat recovery (up to 60%) and variable air volume control, adapting airflow to match extraction rates. This results in significant energy savings while maintaining optimal indoor air quality and pressure balance.

HEAT OUTPUT RANGE:

30kW to 4000kW – (higher outputs available upon request)

TURNDOWN RATIO: Up to 20:1

FUELS: Natural Gas or LPG

MODEL RANGE:

- Direct Fired
- In-Direct Fired
- Make Up Air

NORDAIR NICHE KEY FEATURES

Low Installation Costs

Even Heat Distribution

Rapid Warm-Up

Improved Air Quality

Low Maintenance

Direct fired models – 100% thermal efficiency

Please contact sales on 01384 489700 for more information on our Heating & Ventilation Systems and the team can provide selection advice.

EURO T+ HEATING, VENTILATION & COOLING UNIT

The EuroT+ is the re-engineered evolution of the trusted Euro-T by Reznor, now enhanced with advanced features for superior performance. Designed for versatility, this unit supports a wide range of heating, ventilation, and optional cooling needs across diverse environments.

With seven output ratings and various fuel types available, the EuroT+ offers unmatched flexibility and seamless integration into both existing and new systems, made bespoke to suit any application. Its compact design for easy retro fitting makes it an ideal choice for replacing existing HVAC systems, minimizing installation complexities and downtime.

OUTPUT RANGE: 30–200 kW

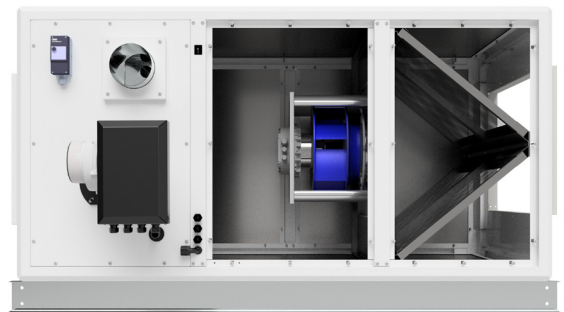

FUNCTIONS: Heating, Ventilation, Optional Cooling

FUEL OPTIONS: Natural Gas, LPG, LPHW, Electric

APPLICATIONS: Retrofit & New Installations

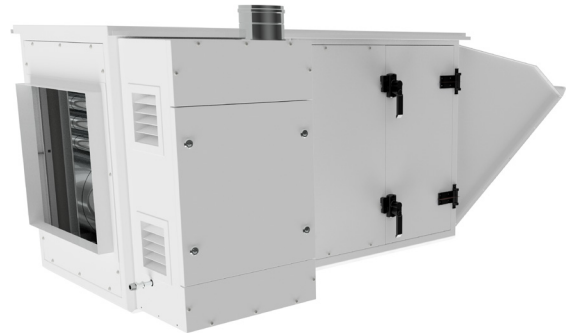

MODEL RANGE:

- 7 non-condensing models with heat output ranging from 24–97kW
- 3 fully condensing models with heat output ranging from 54–99kW
- Larger Bespoke models available to 1000kW

Our advanced heating solutions feature the innovative 4-pass heat exchanger technology, maximizing heat transfer efficiency for superior performance. With versatile options including chilled, cooling, electric, and heat pumps, our systems cater to diverse needs for Heating Ventilation and Cooling.

The EuroT+ has a reliable single burner with multi-try ignition, ensuring consistent performance, while durable stainless steel heat exchangers provide long-lasting durability. The standard modulating burner offers precise control over heat output, complemented by an advanced plug fan with EC control for efficient airflow management.

EURO T+ KEY FEATURES

Cost effective compared to a standard AHU

Combined heating & cooling effect – available as Gas, Electric, LPHW

Easy replacement for existing heating and ventilation units

Bespoke design to suit any project

Compatible with the Smartcom3 controller.

Please contact sales on 01384 489700 for more information on our Heating & Ventilation Systems and the team can provide selection advice.

RHC⁺

GAS FIRED HEAT MODULE

Back by popular demand, Reznor's RHC+ is the latest generation heat module on the market. Fully packed with net efficiencies of up to 109%, the ultra LowNox RHC+ is ideal for replacing LPHW or electrical coils to gas. With a modular design to fit a wide variety of applications, the RHC+ can easily be retrofitted to replace existing units from other suppliers as well as older RHC appliances.

The RHC+ is next generation of heating modules, ideal for installation in ductwork systems and a variety of industrial applications including drying and curing.

The new and improved RHC+ is Ideal for replacing steam and hot water coils in existing units, enabling the change from central boiler plant to be decentralised gas fired systems.

HEAT OUTPUT RANGE: 10–1000 kW

TURNDOWN RATIO: Up to 18:1

MOUNTING: Internal & External

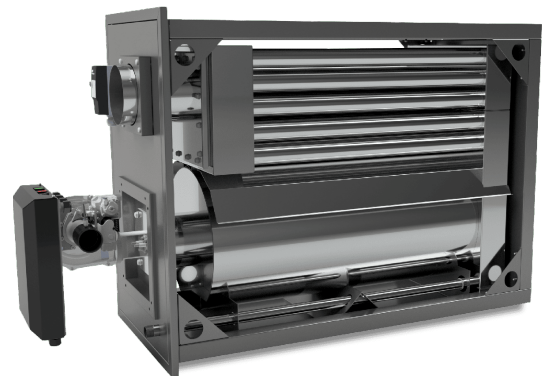

PACKAGED: Pre-assembled on frame for coil slide installation

MODEL RANGE:

- RHC+ SL WMV - Vertical mounted single module 7 models 30 to 200 kW
- RHC+ SL WMH - Horizontal mounted single module 7 models 30 to 200kW
- RHC+ WMI - Horizontal modules 16 models 30 to 1000 kW
- RHC+ Stacked - Vertical or horizontal.

The RHC+ Gas Fired Heat Module is a high-efficiency, factory-assembled heating solution designed for seamless integration into Air Handling Units (AHUs). Each monobloc unit is fully wired and features burner controls consolidated on a single, easily accessible side for simplified operation and maintenance.

Engineered for both indoor and outdoor use, the RHC+ ensures fast, straightforward installation and optimal energy performance through its wide modulation range and compatibility with various control systems.

RHC+ KEY FEATURES

Up to 109% net efficiency & Ultra-low Nox

Replaces older RHC4000 & 8000 units & competitor heat modules*

Modular design (Vertical, Horizontal, or Stacked)

High turndown ratio in module format up to 50:1

High temperature heat modules available

High efficiency – condensing or non-condensing

Please contact sales on 01384 489700 for more information on our Heat Module range and the team can provide selection advice.

SURFACE MOUNTED COMMERCIAL AIR CURTAINS

GUARDIAN EC

Guardian EC series are commercial/retail air curtains designed for suspension via optional horizontal or vertical brackets, to serve doors/entrances. Designed with an energy efficient EC fan, the unit uses up to 30% less energy than traditional ac fan motors.

The Guardian EC is made from recyclable materials* and features a sleek RAL 9006 finish, supporting sustainability goals while delivering a modern, visually appealing design.

Comes with Intelligent Wi-fi controller & smart phone app as standard.

Available in three versions:- ambient (unheated), electric (heated) or LPHW (heated)

TERMS & CONDITIONS

We will confirm a site date upon receipt of full instructions and paperwork.

No order shall be binding until acknowledged by Nortek Global HVAC in writing.

The products covered by this price list are all deemed to be of standard colour, duty and specification.

All prices are ex-works. Carriage will be charged at the rate ruling at date of despatch.

Minimum order charge £25.00 plus p&p on small items.

VAT will be additionally charged at the ruling rate on date of invoice.

PAYMENT TERMS

30 days from date of invoice for approved accounts. Payment prior to despatch and early payment discounts quoted upon request.

RETURNS POLICY

We hope you will be completely satisfied with any product or component purchased from Nortek Global HVAC UK Ltd, but if you wish to return an item, we aim to make it as quick and convenient as possible.

RETURNS PROCESS

Please call 01384 489 700 and select from one of the options for the relevant product return.

Please have your return details ready and our trained staff will guide you through the process. On acceptance a returns material authorisation number will be given which must be included both on the packaging and returns paperwork. Upon the issuing of an RMA number, goods must be returned to us within 10 working days. We are unable to process any goods returned without an RMA number.

Not all requests to return goods will be accepted.

DAMAGED IN TRANSIT

If you take delivery of a product that has been damaged in transit, the goods must be checked and any damage reported in writing within 3 working days. Claims made outside this period will not be considered. The product then requires return/collection within 10 working days.

RETURN OF FAULTY GOODS

Should a fault develop with a product purchased from us within the first year of ownership, please contact our Service department with details of the fault and we will advise you how to proceed. Nortek Global HVAC UK Ltd reserves the right to either replace or repair faulty item[s]. Should we deliver a replacement item we will invoice for it, crediting the faulty item upon receipt.

ORDERED INCORRECTLY/INCORRECTLY SUPPLIED/NOT REQUIRED

If an item has either been ordered incorrectly, incorrectly supplied or is not required, it can be returned within 30 days from purchase as long as it remains unused, in new condition and with all packaging and labels intact. Should Nortek Global HVAC UK Ltd incur any costs in re-working or re-packaging the returned items to a re-saleable condition, this will affect the amount of credit due.

Returned items that have been ordered incorrectly or are not required will incur a 25% restocking charge. If these items are collected, a collection charge will also apply. Heaters built to customer specification will not be eligible for return; any cancellation prior to despatch will be subject to a charge relevant to costs incurred.

EXCESS ITEMS

Nortek Global HVAC UK Ltd systems are designed using the information available to us at the time. Due to the high cost of handling and risk of damage, it is not possible for excess Nor-Ray-Vac, herringbone materials or warm air flue to be returned for credit.

DELIVERY DATES

All dates quoted for delivery are approximate only and Nortek Global HVAC UK Ltd shall not be liable for the delay in delivery of goods however caused. You are advised to ensure that goods have been delivered to the required location before committing labour.

RADIANT HEATER STILLAGE

For large radiant heater orders, components are delivered on stillages, which should be unloaded upon receipt and returned to the delivery vehicle. Failure to do so will result in additional charges to collect and return stillage[s].
